Ziyad Tber

Software Engineer | Full-Stack Web & Automation

Marrakech, Morocco | +212 767 439 353 | tber.ziyad.dev@gmail.com | linkedin.com/in/ziyad-tber | github.com/ziyad455 | ziyadtber.netlify.app

SUMMARY

Full-stack Software Engineer with professional production experience across frontend, backend, and CMS-integrated web platforms. Builds with React, TypeScript, Node.js, Python, and PostgreSQL — designing REST APIs, resolving accessibility and performance issues, and shipping features end-to-end. Increasingly focused on business automation and AI-agent systems, using tools like Mastra and n8n to connect APIs and streamline operational workflows.

SKILLS

Languages: TypeScript, JavaScript, Python

Frontend: React, Astro, Tailwind CSS, HTML5, CSS3

Backend & Data: Node.js, Express.js, FastAPI, PostgreSQL, Prisma, REST APIs

AI & Automation: Mastra, n8n, AI Agents, LLM Integration, Workflow Automation

Engineering & Quality: Git, Docker, Accessibility (WCAG), Web Performance, Technical SEO, Debugging & Testing

PROFESSIONAL EXPERIENCE

Software Engineer — *INVENEO (Nexus Inclusion)* *Jan 2026 – Aug 2026*

- Delivered production fixes and features across 125+ engineering issues spanning frontend, accessibility, technical SEO, CMS integration, and performance on an Astro/Strapi platform.
- Resolved accessibility issues across semantic HTML, keyboard navigation, ARIA/live regions, and form flows, validating fixes with TalkBack and NVDA.
- Fixed system-level SEO issues — canonical URLs, pagination, sitemaps, redirects, structured data — and set up HubSpot, GA4, and Search Console tracking.
- Investigated and resolved frontend performance issues (LCP, CLS, render-blocking CSS), improving Lighthouse scores via Astro's Sharp image pipeline.
- Integrated Strapi CMS content structures with the frontend and patched security headers for production hardening.

JavaScript Instructor — *CGI–ENSA Marrakech Bootcamp* *Feb 2026*

- Taught JavaScript fundamentals — DOM manipulation, functions, control flow, debugging — through hands-on exercises for bootcamp participants.

PROJECTS

WhatsApp Automation Platform — Multi-Tenant Business Automation

React, TypeScript, Node.js, Mastra, PostgreSQL

- Built the core architecture for a multi-tenant WhatsApp automation platform, including a React/TypeScript dashboard and Node.js backend for configuring AI-driven, multilingual customer service.
- Designed a shared AI-agent architecture (Mastra) that adapts to each tenant's business context and rules without duplicating agent logic per client.
- Implemented tenant-scoped data isolation and authentication in PostgreSQL; messaging integrations and additional features are in active development.

Sophia — Full-Stack Reading Platform

React, TypeScript, Node.js/Express, PostgreSQL, Prisma

- Built a full-stack app with authenticated, user-scoped libraries and ownership-aware backend APIs controlling access to personal documents.
- Designed a document-processing pipeline that extracts pages, detects chapters, and generates structured content chunks while preserving the original PDF.
- Implemented persistent user data (reading progress, highlights, notes) with PostgreSQL/Prisma, enforcing per-user access control across endpoints.

DiffShow — Published Developer Tool

Node.js, TypeScript, CLI

- Built and published an open-source CLI tool that converts Git diffs into readable HTML reports for code review.
- Designed the diff-parsing and rendering pipeline; wrote documentation and published to npm and GitHub for public use.

Tamazight MultiLingo — Google DeepMind Gemma 3n Hackathon

React Native, TypeScript, SQLite, Convex, Gemma 3n

- Built mobile application features for a multilingual translation app, integrating a fine-tuned Gemma 3n model with a custom Tifinagh input/display experience.
- Implemented offline/online data architecture using SQLite and Convex, contributing as part of a senior-led AI/ML team for the Gemma 3n Impact Challenge.

EDUCATION

Diplôme en Développement Web — IISTA NTIC SYBA *2024–2026*

Mathematics, Physics, and Computer Science — Faculté des Sciences et Techniques (FST) *2023–2024*

LANGUAGES

Arabic — Native | English — Advanced | French — Intermediate
