Moroco, Marrakech

Education

Diplôme en Développement Web

IISTA NTIC SYBA | 2024–2026

Mathematics, Physics, and Computer Science

Faculté des Sciences et Techniques (FST) | 2023 – 2024

Skills

Programming Languages: TypeScript, JavaScript, Python, PHP

Frontend: React.js, Astro, HTML5, CSS3, Tailwind CSS,

Backend: Node.js, Laravel, FastAPI, Express.js,

Databases: PostgreSQL, MySQL, Prisma, SQLite

AI / Machine Learning: Hugging Face, LangChain, Scikit-learn, model fine-tuning, RAG

Tools : Git, Docker, Jira, Linux, SonarQube

Web & Quality: WCAG, accessibility testing, responsive design, technical SEO, web performance

Language

Arabic: Native

English: Advanced

French: Intermediate

summary

Software Engineer with professional experience across frontend development, accessibility engineering, technical SEO, web performance, and CMS-driven platforms. Experienced with React, TypeScript, Astro, Node.js, Laravel, PostgreSQL, and Strapi, with additional hands-on work in AI/ML applications and developer tooling. Focused on building reliable, accessible, and maintainable web products.

Professional Experience

Software Engineer — INVENEO | Jan 2026 – Aug 2026

- Contributed across 125+ engineering issues spanning frontend development, accessibility, technical SEO, CMS integration, performance, and product quality for Nexus Inclusion's production platform
- Implemented accessibility improvements across semantic HTML, keyboard/focus behavior, forms, ARIA/live regions, screen-reader interactions, tables, and responsive experiences, including TalkBack and NVDA testing.
- Resolved system-level SEO issues across canonical URLs, pagination, sitemaps, redirects, indexing rules, structured data, metadata, and heading structure across Astro/Strapi templates.
- Investigated and improved frontend performance issues involving LCP, CLS, render-blocking CSS, asset loading, DOM size, forced reflows, image optimization, and responsive UI quality.
- Customized Strapi content structures and frontend integrations while contributing to Free Scan flows across validation, loading, retry, success, responsive UI, and accessibility states.

JavaScript Instructor – ENSA Marrakech Bootcamp | Feb 2026

- Taught JavaScript fundamentals including DOM manipulation, functions, control flow, and debugging.

Projects

Tamazight MultiLingo — Google DeepMind Gemma 3n Hackathon

Gemma 3n, Hugging Face, React Native, TypeScript, SQLite, Convex, LoRA

- Contributed as an AI/ML developer and researcher under the guidance of a senior AI/ML engineer to a multilingual translation application focused on Tamazight and Tifinagh.
- Participated in fine-tuning, dataset preparation, evaluation, and deployment research for Gemma 3n models; the project explored 15+ model variants using a 100,000+ translation-pair dataset.
- Contributed to the React Native application and offline/online architecture using SQLite and Convex, while investigating on-device deployment constraints across TFLite, LiteRT, and GGUF.

Sophia — AI-Assisted Philosophy Reading Companion

- Building a private full-stack philosophy reading platform with authenticated personal libraries, protected PDF access, persistent reading progress, text selection, highlights, and private notes.
- Designed a document-processing pipeline that extracts pages, detects chapters, and generates structured chunks while preserving the original PDF as the primary reading experience.
- Implemented user-scoped ownership and private file access across books, progress, highlights, and notes, with PostgreSQL/Prisma persistence and ownership-aware backend APIs.
